

COLIBRI Free

Circular ceiling diffuser with nozzles for suspended installation

QUICK FACTS

- Rotatable nozzles
- 100% flexible distribution pattern
- Provision for vertical air diffusion
- Swirl function
- Substantial induction capacity
- Designed for installation in rooms without suspended ceiling
- Easy access
- Can be supplied in a galvanized design
- Standard colour White RAL 9003
 - 5 alternative standard colours
 - Other colours upon request

AIR FLOW - SOUND PRESSURE ROOM (Lp10A) *)

315	165	594	195	702	230	828
400	181	652	210	756	245	882

Data presented for an open damper. The product's full working area in terms of pressure, flow and sound are evident from the sizing diagrams.

**) Lp10A = Sound pressure incl. A-filter with 4 dB room attenuation and 10 m² room absorption area.*

Technical description

Version

The supply air diffuser consists of a circular commissioning box and a removable diffuser face. The commissioning box contains a removable commissioning damper, fixed measurement tapping and sound absorbent insulation covered by a reinforced surface layer, rated to Fire resistance class B-s1,d0 conforming to EN ISO 11925-2. The diffuser face is equipped with aerodynamic, rotatable nozzles.

Materials and surface treatment

The diffuser face is made of sheet steel. The commissioning box is made of galvanized sheet steel. The diffuser is finished, internally and externally.

- Standard colour:
 - White semi-gloss, lustre 40, RAL 9003/NCS S 0500-N
- Alternative standard colours:
 - Silver gloss, lustre 80, RAL 9006
 - Grey aluminium gloss, lustre 80, RAL 9007
 - Blanc semi-brillant, lustre 40, RAL 9010
 - Black semi-gloss, lustre 35, RAL 9005
 - Grey semi-gloss, lustre 30, RAL 7037
- Non-painted finish and other colours available on request.

The nozzles are made of plastic (PP-polypropylene).

Adaptation

Besides the standard sizes, the air diffusers can be ordered with adapted dimensions, alternative number of nozzles, special nozzle pattern, etc. COLIBRI Free is also available in a galvanized version. For further particulars, get in touch with your nearest Swegon representative.

Project planning

The nozzles are rotatable through 360°. This makes it possible to achieve an infinite number of horizontal or vertical air diffusion combinations without altering the air flow, sound level or pressure drop. The measurement method for COLIBRI free is in accordance with the differential pressure method of measurement in the inlet air branch. This requires a length of straight duct upstream of the ceiling diffuser's measurement unit, as in table 1, so as not to exceed the specified measurement inaccuracy.

The measurement tapping for supply air is located in the duct connection of the air diffuser whereas the measurement tapping for extract air is located inside the commissioning box.

Installation

The air diffuser is normally suspended from the ceiling. An M8 pop nut, i.e. a threaded grommet that facilitates installation, is in the centre of the top of the air diffuser. On the size 315 and 400 air diffusers, there are two M8 pop nuts for more stable mounting, see figure 1.

Refer to the separate Installation-Commissioning-Maintenance document for detailed installation instructions.

Commissioning

Commissioning should be carried out with the wall diffuser face mounted. Pull the measuring tubes and damper adjustment cords out of the air diffuser through the nozzles. The rated coefficient of performance (K-factor) is specified on the identification label of the product and in the relevant commissioning instructions at www.swegon.com.

Maintenance

- Clean the air diffuser if needed with lukewarm water and dishwashing detergent added.
- The duct system can be accessed and lightly pulling the spring-loaded diffuser face downwards and then tilting, see figure 2.
- Dismantle the perforated air distribution plate located on the inlet as shown in figure 3.
- Loosen the damper in the inlet from its bayonet fastening by rotating to the side.

Environment

The Building Materials Declaration is available from www.swegon.com

Table 1.

Type of obstruction upstream of COLIBRI F	Straight section before COLIBRI F	
	$m_2 = 5\%$	$m_2 = 10\%$
One 90° bend.	3 x Ød	2 x Ød
Two 90° bends in the same plane	4 x Ød	2 x Ød
Two 90° bends in alignment at right angles to one another.	4 x Ød	2 x Ød
One 45° damper	6 x Ød	3 x Ød
One T-piece	4 x Ød	3 x Ød

m_2 = Error of method according to NVG's Report T32:1982

Sizing

- The sound level dB(A) applies to rooms with 10 m² equivalent sound absorption area.
- The throw $l_{0.2}$ is measured under isothermal discharge conditions.
- A max. permissible temperature below room temperature of 14 K is recommended when setting the nozzles for clockwise swirling air discharge (standard).
- To calculate the air stream diffusion, air velocities in the occupied zone or sound levels in rooms with other dimensions, please refer to our calculation software available on www.swegon.com.

Sizing diagram

COLIBRI F – Supply air

Air flow - Pressure drop - Sound level – Throw length

- The throw $l_{0.2}$ is measured under isothermal discharge conditions.
- A max. permissible temperature below room temperature of 14 K is recommended when setting the nozzles for clockwise swirling air discharge (standard).
- To calculate the air stream diffusion, air velocities in the occupied zone or sound levels in rooms with other dimensions, please refer to our calculation software available on www.swegon.com.
- The diagrams should not be used for commissioning.

- ∇ = Min. flow required for obtaining sufficient commissioning pressure.
- The dB(A) values apply to rooms with normal acoustic absorption, 4 dB room attenuation/10 m² equivalent room absorption area.
- The dB(C) value is normally 6-9 dB higher than the dB(A) value.
- For data regarding vertical distribution pattern, please refer to our calculation software available on www.swegon.com.
- For particulars of the throws, see Table 2: Factors for alternative nozzle settings.

COLIBRI F 200

COLIBRI F 250

Throw lengths

The throw $l_{0.2}$ is specified in the sizing graphs for standard nozzle settings, clockwise swirling air discharge. If a different setting is desirable, Table 2 can be used. See also figure 3, Nozzle settings, under Dimensions and Weights.

Table 2. Factors for alternative nozzle settings

4-way	3-way	2-way	1-way
1,5	2.1	2,5	3.8

Example:

According to the graph, the COLIBRI F 250 has a throw of $l_{0.2} = 2.3$ m.

For 2-way air diffusion $l_{0.2} = 2.3 \times 2.5 = 5.75$ m.

Specification text

Swegon's complete circular type COLIBRI Free Ceiling nozzle diffuser for visible installation in ceilings with the following functions:

- Compete round painted unit.
- 100% flexible distribution pattern
- Individually adjustable nozzles
- Removable commissioning damper with lockable setting
- Measurement function with low error of method
- Interior sound-absorbing lining with fibre-migration-proof surface layer
- Cleanable
- Powder-painted and baked white finish, RAL 9003/NCS S 0500-N
